

**KERBEROS**  
HANDY V2

## HAND-HELD SYSTEM FOR INSPECTING VEHICLE UNDERCARRIAGES

### DESCRIPTION OF THE SYSTEM

The KERBEROS HANDY V2 is the ideal device for police units, security agencies and rescue services. An analogue camera records the inspection and the image is shown online on the operator's display. The camera has an LED diode light, which lights up dark zones of the area being scanned and enables work in poor lighting conditions. Kerberos Handy V2 is suitable for indoor inspection in buildings such as prisons and similar buildings with increased security.

## APPLICATION

- power plants
- airports
- chemical plants
- hotels
- prisons
- security services
- government and military facilities
- state borders
- temporary military or civil bases

## SYSTEM PROPERTIES

- inspection of undercarriages and indoor inspection in buildings under difficult or restricted operating conditions
- clear full-colour, high-resolution image
- long battery life in stand-by mode
- low weight approx. 1.8 kg
- simple and fast operation
- dust and water resistance IP65
- LED lighting
