ORTHOS
GUARD

A PORTABLE SECURITY AND CAMERA SYSTEM

DESCRIPTION OF THE SYSTEM

The ORTHOS GUARD security system uses cameras and sensors to quickly create your own closed security system. The system is portable and can be deployed in any environment. It consists of the operator's station, security system and camera system. The system enables you to create fast and simple map bases and the entire structure of the guarded building.

APPLICATION

- private sphere
- security services

SYSTEM PROPERTIES

- creation of your own closed security circuit
- portable, stored in PELI cases
- modularity and speed of distribution of security elements
- wireless data transfer to the operations room with the system's own encryption
- intuitive user environment

SYSTEM ARCHITECTURE

Central unit

Sensors

Operations post

Portable display equipment

Back-up power supply

Generator

VOP CZ SECURITY
